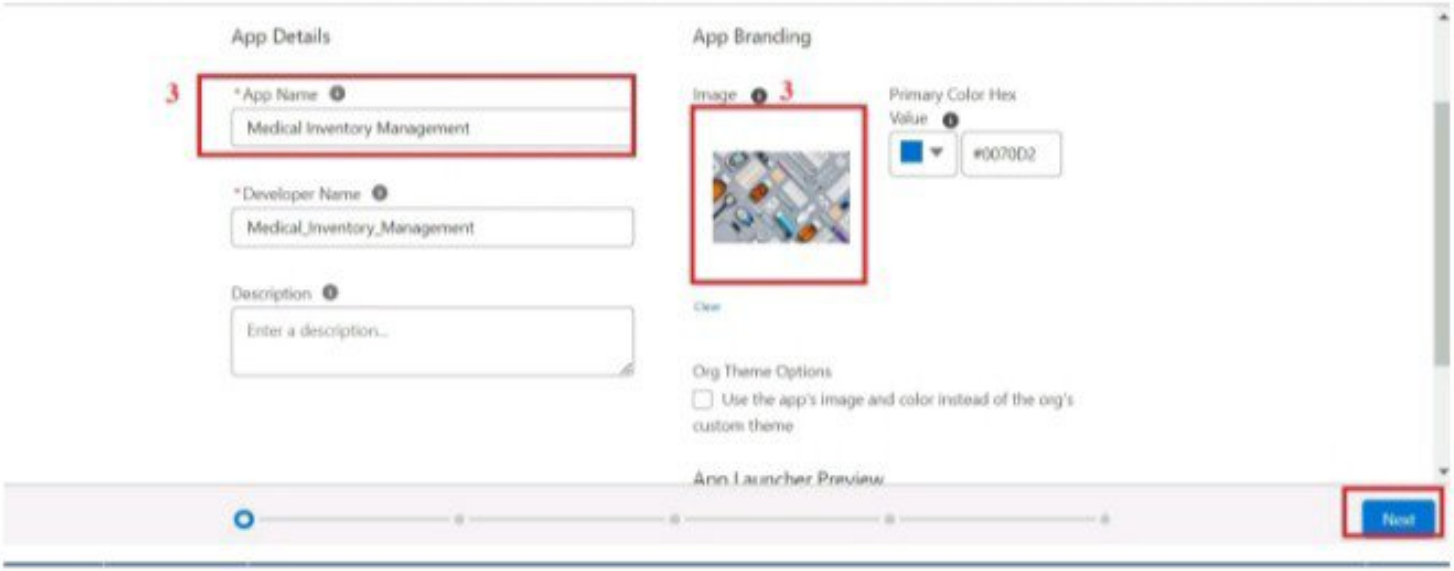
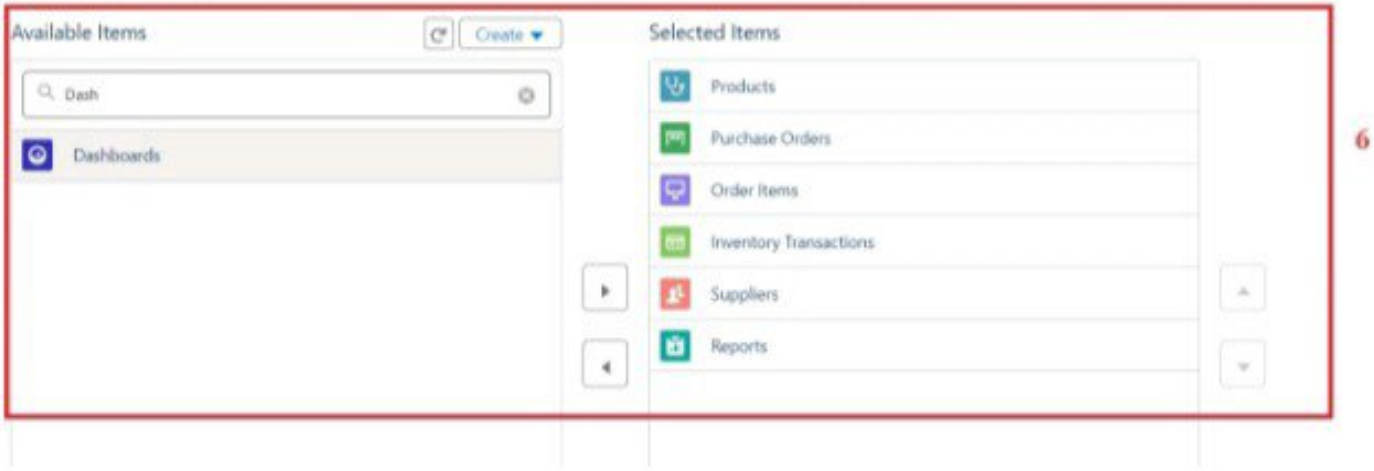
8. Click Save & Finish.





Data Type

- None Selected — Select one of the data types below
- Auto Number — A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.
- Formula — A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.
- Roll-Up Summary — A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list. 4
